

SHINE ON THIS SUMMER WITH THE LATEST AND GREATEST SUNWEAR STYLES HITTING THE SCENE. WITH FUN COLORS AND INTERESTING MATERIALS, THERE'S A SUNGLASS OUT THERE FOR EVERYONE. -VICTORIA GARCIA

SUNNING UP

Dragon's H2O material has the lowest density of any other thermoplastic materials, which allows the frames to float in the ocean, lake or sea.

SURF'S UP

Dragon Alliance from **Marchon Eyewear** has linked up with world champion surfer, Mick Fanning to craft his own signature style. The Baile (pronounced "balh-yay") is a nod to the surfer's Irish heritage, and the silhouette takes inspiration from his interpretation of the Gaelic word meaning "home." This sunglass style is available with Dragon's H2O floatable technology which is a specially formulated, lightweight injection molded thermoplastic.

L'Amy America offers Sperry XS, a specialty fit collection with smaller than average sizing for men.

FLY HIGH

L'Amy America introduces new sunwear styles from its Sperry eyewear collection. The Miramar is a combination aviator which features hand-made acetate with a high-polish finish. This sunglass features multilayered polarized lenses with a vintage lens color as well as minimal temple designs and logo details for a perfect mix of fashion and function.

Founded in 1988, iCoat is a full service, advanced technology optical laboratory which provides various premium thin-film lens treatments.

PRETTY IN PINK

An infusion of crimson hues, the Pink Mirror is one of **iCoat's** new mirror colors. Available in nine eye-catching colors in both solid and flash densities, these solid mirror coatings have a higher percentage of reflectance than their corresponding flash mirror colors. The flash mirror generally has a hint of the color, while the solid mirror shows a higher concentration of the color.
